EDUCATION

University of Central Florida

Bachelor of Science in Computer Engineering, GPA: 4.0

Orlando, FL

Aug. 2024 – May 2028

EXPERIENCE

Solutions Engineer Intern

PeakActivity

Aug. 2026 – Present

Orlando, FL / Remote

- Prototyped an **anomaly-reporting tool** on **SteelEngine**, an agentic workflow-automation platform, using hybrid baselines (prior-day, week-over-week, year-over-year, same-weekday) and materiality gates; validated with a **four-case fixture suite** and calibrated across **8 dates** (0 to 3 incidents on quiet days, 8 on a high-signal day).
- Built a Jira-to-Playwright **QA-automation proof of concept**: a deterministic compiler that turns tickets into versioned test cases, limited to HTTPS domains and allowlisted actions and rejecting destructive checkout and payment steps. Browser execution is not yet connected.
- Deployed a **Gmail-to-Slack demo-request automation** that claims each email by Gmail message ID to block duplicates, strips signatures and scripts, and posts attachments in a Slack thread with a recorded receipt; **8 deliveries** logged.

President

Bengali Student Association

May 2026 – Present

Orlando, FL

- Restructured board operations by creating dedicated committees (Outreach, Dance) and **delegating ownership** across a **9-person board**, enabling parallel execution of **15 planned events** without adding headcount.
- Enabled the Outreach Committee to run weekly tablings independently by building an **inventory, sales log, and profit tracking system**, contributing to a **110% increase** in average per-tableting revenue year-over-year.
- Oversee a **\$3,700** annual budget allocated by SGA across **3 flagship events**, securing **\$1,883.88** in itemized funding approval for the first event through vendor negotiation, compliance documentation, and multi-form procurement requests.

UI/UX Designer

Knight Hacks

Apr. 2026 – Present

Orlando, FL

- Designing **wireframes, landing page layouts**, and **conversion-focused UI flows** for Knight Hacks IX, guiding users toward key CTAs and contributing to a **41% increase** in applications for **1,000+** expected applicants.
- Maintain a **Figma** and **Notion** design system across a **17-person** design team for clean developer handoff.

PROJECTS

FinePrint (SASEhack 2026) | *Next.js, TypeScript, FastAPI, PyMuPDF, OpenAI API, Vercel*

Sept. 2026

- Designed a financial-aid letter analyzer, built with **two AI coding agents**: a model extracts typed claims, and a deterministic **evidence gate** checks each quote and amount against the PDF text before any calculation uses it.
- Kept all financial math in **pure TypeScript** in the browser so scenarios recompute instantly without the API; **87 API tests, 53 web tests, and 5/5 synthetic corpus layouts** passing at last run.
- Routed extraction to a balanced-cost model by default and a stronger fallback only on validation failure, with SDK retries disabled; live runs cost about **\$0.06** each on synthetic stress letters.

EcoStep (BloomKnights 2026) | *Next.js, TypeScript, Tailwind CSS, Supabase, Gemini API, Vercel*

July 2026

- Architected an **AI reliability layer** for 2 Gemini vision pipelines with a **4-model fallback chain** and co-designed a **9-category error taxonomy**, mitigating single-model outages after a production Gemini model was retired mid-build.
- Built a **5-engine home-intelligence system** (rebate matching, affordability simulation, outage-resilience planning, group-buying, coaching) across **7 REST API routes** with **8 unit tests** covering the engines.

Bolo | *Next.js, TypeScript, Tesseract.js, Gemini API, OpenAI API, Vercel*

June 2026

- Cut drafting time for a real business email thread from **30 to 4 minutes** (self-timed, before/after), building a full-stack **Next.js** app that converts native-language text, speech, and email screenshots into polished English emails.
- Wrote **35 regression tests** checking that embedded English brand names, phrases, and numbers survive translation into Bangla, Spanish, and Gujarati instead of being translated away.
- Hardened production reliability with prompt-injection detection, Unicode-aware OCR cleanup, and runtime API validation, backed by **97 passing offline unit tests** and **10 bugs** fixed in a dedicated audit pass.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, TypeScript, JavaScript, ARM Assembly

Frameworks & APIs: Next.js, React, Flask, Tesseract.js, Flutter, Tailwind CSS, REST APIs, Gemini API, OpenAI API

Tools & Platforms: Git, Vercel, Supabase, MATLAB, Figma, Notion, Adobe Photoshop, Canva, Microsoft Office

Hardware & Systems: FPGA, Vivado, RTL Design, Autodesk Inventor, Autodesk Revit

Awards: President's Honor Roll, Pegasus Gold Scholar, Bright Futures Florida Academic Scholar, Eda & Cliff Viner Scholar.
